

## FAE Rotary Cutter

Tested in the most challenging environments, these fixed-tooth hydraulic rock-crushing machines are capable of cutting through hard rock quickly and efficiently. They are widely used in road construction, underground utility work, tunneling, trenching, mining, quarrying, the oil & gas industry, and more.

### KEY FEATURES

- Hydraulic system with onboard fillers
- Hydraulic piston motor with direct drive to the drums
- Safety cover that protects the motor
- Longer life of the motor shaft as it does not support the weight of the drums
